DETAILED ACTION

Receipt is acknowledged of the election filed 09/25/03. An IDS was filed on 10/25/02.

Election/Restrictions

Applicant's election with traverse of Group I in Paper No. 8 is acknowledged. The traversal is on the ground(s) that there is no serious burden in examining and searching the other groups. This is not found persuasive because search of all the other groups would entail not only separate and distinct methods, but also search of groups such as 424, and those involving immune response which are found in the biotechnology arts.

The requirement is still deemed proper and is therefore made FINAL.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-26, 34-49 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-30 of copending Application No. 10/211025 ('025). Although the conflicting claims are not identical, they are not patentably distinct from each other because '025 claims a submicron oil in water emulsion comprising a metabolizable oil (see claim 4, and emulsifying agent (claims 4 and 11). Microparticle may be further formed from polymers such as polylactides (see claim 2). Antigens such as viruses may be trapped in the microemulsion (see claims 6-8). It would therefore have been well within the skill of the ordinary practitioner to claim the instant microemulsion given the claims of '025 with the expectation of similar therapeutic results. The instant emulsion would have been obvious given the claims of '025.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
